

Student Name: _____ **Grade:** 7

Subject: Science

Chapter No. & Name: 6 .Respiration in organisms

Date: _____

Task Sheet-1

Annexure: IV.1

Task: Perform activity 6.4 and 6.5 and respond to the questions given below.

Instructions:

- Submit the sheet within time.
- Write your observation in the given space.
- Refer NCERT activity 6.4 and 6.5 for further details.

1. Calculate size of chest based on the given criteria of yourself and at-least five of your classmates in the following table. (Refer 6.4, NCERT text book).

Name of the Classmate	Size of the chest (cm)			
	During inhalation	During exhalation	Difference in size	At rest

2. Design a model on your own to show the mechanism of breathing by referring to protocol.

Protocol:

1. Take a wide plastic bottle. Remove the bottom. Get a Y-shaped glass or plastic tube.
2. Make a hole in the lid so that the tube may pass through it.
3. To the forked end of the tube fix two deflated balloons.
4. Introduce the tube into the bottle as shown in Figure given below.

5. Now cap the bottle. Seal it to make it airtight. To the open base of the bottle tie a thin rubber or plastic sheet using a large rubber band.
6. To understand the expansion of the lungs, pull the rubber sheet from the base downwards and watch the balloons.
7. Next, push the rubber/plastic sheet up and observe the balloons.
Did you see any changes in the balloons?
What do the balloons in this model represent? What does the rubber sheet represent?

Description of Respiratory system in your own words: (based on your design)

Learning outcome: Students will be able to design the model, showing the mechanism of breathing and describe the process of respiration.
